

**Course Title:** Diet and Gene Expression: You Are What You Eat

**Course Code:** BIO 03 W

**Instructor:** Lucia Aronica, PhD

### Course Summary:

There is a give and take between our genes and the food we eat: genes affect nutrient response through genetics, while nutrients affect gene activity through epigenetics. This is a course for those interested in understanding the basic science of diet-gene interactions, and bringing it into their kitchen to optimize their health and defense against disease.

*\*Please see course page for full description and additional details.*

### Grade Options and Requirements:

- No Grade Requested (NGR)
  - This is the default option. No work will be required; no credit shall be received; no proof of attendance can be provided.
  
- Credit/No Credit (CR/NC)
  - Students must participate in at least 70% of weekly discussions.
  
- Letter Grade (A, B, C, D, No Pass)
  - Students must participate in at least 70% of weekly discussions, and complete a final project (to be discussed further in class).

*\*Please Note: If you require proof that you completed a Continuing Studies course for any reason (for example, employer reimbursement), you must choose either the Letter Grade or Credit/No Credit option. Courses taken for NGR will not appear on official transcripts or grade reports.*
